

Suspected Documentation Problems in MOS NOTE 00-2

Judy Ghirardelli
May 17, 2007

1. TIMTRP:

The Table of Contents (TOC) says that TIMTRP is 2.111. The writeup however says it is 2.211. The "2" series writeups only go up to 2.122, so I suspect there is no 2.211, and TIMTRP's writeup should be changed to read 2.111 instead of 2.211. Proposal: change the writeup to be 2.111.

2. TIMBRD:

The TOC has:

2.110* TIMBRD

2.110 is actually TIMGRD. I suspect this is just a typo in the TOC. Proposal: change the TOC to show TIMGRD instead of TIMBRD.

3. PAWRA:

The Table of Contents shows PAWRA as 3.2. The writeup has it as 4.88, but 4.88 is something else (RDONEV). Proposal: change the writeup to be 3.2.

4. CONSTG and CONST1:

The TOC says CONSTG is 4.135 and CONST1 is 4.136. But the writeups themselves say it the other way (CONST1 is 4.135 and CONSTG is 4.136). Which is right?

5. THSET:

The writeup for THSET says its number is 4.89. However, there already IS a 4.89 - RDVECT in Note 4. The Table of Contents says THSET is 6.19. I am thinking that the writeup is incorrect and should be 6.19. Proposal: change the writeup to be 6.19.
